

CommunityManager.NET Version 6

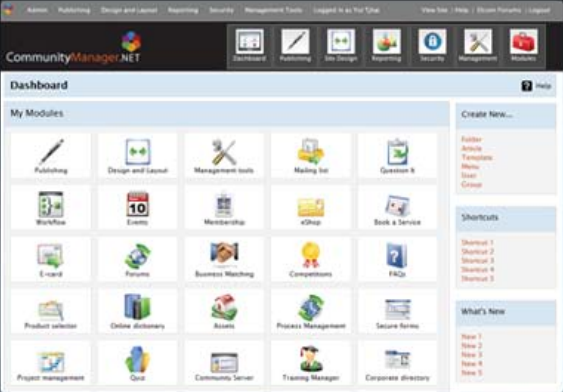

CommunityManager.NET is a state-of-the-art Enterprise Content Management System (ECMS) for secure Internet Portals, Extranets and Intranets.

CommunityManager.NET has more than 50 modules which will help your organisation harness the power of the internet and work more efficiently - great news for your bottom line.

CommunityManager.NET is powering the intranets, extranets and websites of some of Australia's largest companies.

Benefits of CommunityManager.NET Version 6 include:

- ✓ Your website, intranet and extranet are now even easier to manage
- ✓ A user-friendly interface that runs quickly and smoothly on your web browser
- ✓ Increased functionality to cater for every aspect of your business and online scenario needs
- ✓ Even more customisable with the API
- ✓ Save time, reduce bottlenecks and expedite business processes with Parallel Workflow

Elcom is a leading provider of Enterprise Content Manager Systems (ECMS) integrated with custom development, internet and business applications. Elcom is a Microsoft Gold Partner specialising in Enterprise Content Management (ECM) including Microsoft SharePoint integration and development.

The CommunityManager.NET software is a result of Elcom's 12 years experience and in the field of Enterprise Content Management.

We look forward to working with you.

Key Enhancements

Completely revamped User Interface

Redesigned from the ground up, the new admin user interface streamlines all administration and content management tasks, providing a consistent interface, dramatically enhanced usability and much quicker response times.

API

A fully exposed API has been added in the V6 release, allowing enterprises to build their own integration interfaces, as well as enhancing the functionality of core CM modules.

Parallel Workflow

The CM workflow engine now features true parallel workflow, with unlimited numbers of workflow 'baskets' and workflow branches, all managed via a new slick GUI screen. Workflow has been Community Manager's fastest growing module in terms of enterprise uptake, and with parallel workflow now fully supported, Enterprise processes can be even further improved.

Corporate directory V2

The corporate directory module has been significantly enhanced with additional search capabilities, extra fields, and intelligent linking capabilities.

Calendar overlays

The calendar and event functions have always been a strong feature in Community Manager. Now with Calendar overlays, users can see events from other users and groups all consolidated into a single view. Access to other calendars is controlled via simple security permissions.

Training Manager V2

Only six months after its initial release and this popular module has received a substantial UI upgrade. Training Pathways are all created and managed via the new graphical pathway console, with branching and user progress all neatly displayed. Enhanced user controls have been added, and additional reports provided.

Brand new forum module

Community Manager now includes a customised, fully integrated version of the popular Yet Another Forum application. Centralised user administration and interaction with CM security make this a compelling option.

Improved Security Management

Security, user and group management has been significantly streamlined. Simple organising of permissions make the powerful granular controls easy to use.

Improved Publishing

There's been considerable enhancement to the publishing controls, including easy tagging.

Content Manager V2

The content Manager module has been enhanced, allowing easier management of ALL content, including articles, images, video and audio from one easily searchable screen.

Increased Rich Media Support

In addition to the existing WMV and SWF support, Community Manager now supports FLV, and sports a new in-built skinable FLV player.

Online Store Taxonomy

The Online Store module now has complete taxonomy support fully integrated. Searches and taxonomy widgets return results that now encompass the complete product inventory.

Online Help

Online help links are now built into every administration page. Not sure how to use a page? With a simple click, help is at hand.

More modules than you can poke a stick at

Community Manager has more than 50 modules ready for immediate use. Featuring cost-saving, income-generating and enterprise building functionality.

Hosting plans

Along with the release of Community Manager V6.0, Elcom is providing new enterprise level hosting plans. High powered servers, full backup and redundancy plans, increased bandwidth options, database mirroring, media streaming and real time monitoring are now available.
